

SolarMobile Functional Summary

SolarMobile is a Mobile Phone system providing data processing and financial calculation functions

Introduction

Copernicus is widely recognised as an Instalment Finance and Leasing Industry specialist regarding Calculations and Accounting Principles. Always with technology in mind, we have applied this expertise to ensure that the latest technology is utilised for real business benefits. For example, Copernicus was the first to offer full Lease Evaluation on a standalone Personal Computer in 1982, and then on a PDA.

In recent times, the Mobile (Cell) Phone has gained extensive technological improvements. As this device has, and will continue to grow, in terms of functionality, capability and features, we have developed SolarMobile.

Because many business users embrace the Blackberry™, we believe that it makes good business sense to embrace this technology and provide users with a single 'one-stop' device, rather than having different devices for different applications.

SolarMobile can be implemented to either provide a full-featured Industry Financial Calculator with full cashflows, and/or can be used as a front-end Quotation/Proposal system incorporating Scheme management and data upload/download functions.

What is SolarMobile?

SolarMobile has Password Security, is Multi-Lingual, and provides (locally on the phone):

- Financial Modelling functions including:
 - Multiple Cash Flows
 - Produces the complete Cashflow (with income projection etc.) over the Term
 - Staged Advances (multiple advances)
 - Payment Frequency Selection
 - Seasonal Payments
 - Block Payments
 - Balloon Payments
 - Daily and Period Calculations
 - Commission
 - Subsidy

- Data Processing functions e.g.:
 - Proposal Load
 - Calculations based on downloaded Scheme(s)
 - Integrated data selection
 - Upload & Download functions
 - Document Walk-through
 - Analysis
 - Customer Exposure / Arrears
 - Settlement Quotes
 - Cash Collection

How Easy to Use?

SolarMobile has been designed for the modern-day mobile phone. As such, it is incredibly easy-to-use and extremely fast in operation – much faster than you might believe. And, as you would expect from a product from Copernicus, the calculations are accurate.

As stated above, Copernicus has decided to standardise SolarMobile on the latest Blackberry™ range of devices.

What Do I Need & How Is It Installed?

Once your order is taken, SolarMobile can be automatically installed from our web site to your Blackberry™. It really is as easy as that. And if your Blackberry™ becomes inoperative or is lost, we will automatically re-install free of charge.

For the larger applications, Copernicus will initially develop SolarMobile to the Clients own specific business requirements. For this service, the Business Requirements are initially defined and agree, and the Project is conducted on a fixed time and price basis.
